D. R. HEATH-BROWN (Oxford)

It has recently come to my attention that the principal result of my paper *The growth rate of the Dedekind zeta-function on the critical line* (Acta Arith. 49 (1988), 323–339) is a consequence of a theorem of R. M. Kaufman, *Estimate of the Hecke L-functions on the half line* (Zap. Nauchn. Sem. Leningrad. Otdel. Mat. Inst. Steklov. (LOMI) 91 (1979), 40–51, 180–181). I apologize for any embarrassment this may cause.
