

Editorial notes

1. Theorem 2 of the paper *Spectral characterization of operators with precompact orbit* by Andrzej Świąch, *Studia Math.* 96 (3) (1990), 277–282, was obtained by a different method in the paper *Locally compact monothetic semi-algebras* by M. A. Kaashoek and T. T. West, *Proc. London Math. Soc.* 18 (1968), 428–438. The editors are thankful to Professor José E. Galé for pointing out this reference, and apologize to the authors for its overlooking.

2. The editors wish to draw the readers' attention to the regrettable fact that the paper *On transition multimeasures with values in a Banach space* by Nikolaos S. Papageorgiou (Davis, Calif.), this volume, pp. 37–51, appeared simultaneously in *J. Austral. Math. Soc. Ser. A* 49 (1990), 72–89.
