**Correction to  
“ESTIMATING MEDIAN AND OTHER QUANTILES  
IN NONPARAMETRIC MODELS”**

(Applicationes Math. 23 (3) (1995), 363–370)

I am indebted to Dr. Agata Boratyńska of Warsaw University for pointing out an error in the proof of the Theorem in the above paper.

The formula  $C_1(\varepsilon) \nearrow \frac{1}{2}$  as  $\varepsilon \searrow 0$  in the middle of page 365 should be replaced by

$$C_1(\varepsilon) \nearrow \frac{1}{2} - \frac{1}{2} \binom{2n}{n} \left(\frac{1}{2}\right)^{2n} \quad \text{as } \varepsilon \searrow 0.$$

As consequences, the inequality  $C_1(\varepsilon) > \frac{1}{2} - \frac{1}{2} \binom{2n}{n} \left(\frac{1}{2}\right)^{2n}$  should read

$$C_1(\varepsilon) > \frac{1}{2} - \frac{3}{4} \binom{2n}{n} \left(\frac{1}{2}\right)^{2n}$$

and the inequality  $C_2(\varepsilon) > \frac{1}{2} \binom{2n}{n} \left(\frac{1}{2}\right)^{2n}$  should read

$$C_2(\varepsilon) > \frac{3}{4} \binom{2n}{n} \left(\frac{1}{2}\right)^{2n}.$$

The Theorem remains valid as stated.
