J. Ławrynowicz (ed.)

Generalizations of Complex Analysis and their Applications in Physics

WARSZAWA 1996
PREFACE

The Symposium, held May 30 – July 1, 1994, was attended by 141 mathematicians, mathematical physicists and physicists from 29 countries. It embraced 147 lectures and numerous informal discussions. The number of foreign participants was 79, including 11 research students. The number of Polish research students was 20.

The participants discussed a broad range of topics.

A. Workshop on Generalizations of Complex Analysis (May 30 – June 12) covered: 1) generalized complex structures, 2) Clifford-type structures, 3) Hurwitz pairs and triples. The workshop was organized by K. Habetha (Aachen), J. Lawrynowicz (Łódź) – Chairman, J. Rembieliński (Łódź), O. Suzuki (Tokyo), and P. M. Tamrazov (Kiev). It took place in the Banach Center.

B. XI Conference on Analytic Functions (June 13 – June 19) covered: 1) extremal problems related to one complex variable, 2) potential theory in $\mathbb{R}^n$, 3) real and complex analytic geometry, 4) complex mappings and related structures. The conference was organized by Z. Charzyński (Łódź), S. Dimiev (Sofia), P. Dolbeault (Paris), H. Grauert (Göttingen), Z. Jakubowski (Łódź), J. Krzyż (Lublin), J. Lawrynowicz (Łódź) – Chairman, O. Martio (Helsinki), V. V. Napalkov (Ufa), and J. Siciak (Kraków). It took place in the Banach Center and the Military Holiday Center at Rynia, ca. 25 kms to the north of Warsaw, in the picturesque forest area at the Zegrzyński Lake. The preceding conferences were organized in:

1. Łódź 1954, 6. Kraków 1974,
2. Lublin 1958, 7. Kozubnik 1979,
4. Łódź 1966, 9. Lublin 1986,

The present conference gave an opportunity for the exchange of new ideas and stimulated cooperation leading to joint papers. It is hoped that this series of conferences will continue to give valuable scientific contributions.

C. Seminar on Deformations of Mathematical Structures Applied in Physics (June 20 – July 1) covered: 1) complex and related structures of physical interest and applicable in physics, 2) Clifford- and Hurwitz-type structures applicable in physics, 3) direct physical
applications. The seminar was organized by J. Lawrynowicz (Lódź) – Chairman, J. Rembieliński (Lódź), W. Rodrigues (Campinas), and C. Surry (Saint-Étienne). It took place in the Banach Center.

During the Symposium, its distinguished guest, Professor Friedrich Hirzebruch (Bonn), President of the Scientific Council of the Banach Center, delivered a plenary lecture entitled *The Riemann-Roch theorem and holomorphic symplectic manifolds*.

The present volume of selected papers submitted for publication contains 32 papers on extremal problems related to one complex variable, real and complex analytic geometry, complex mappings and related structures, generalized complex structures, Clifford-type structures, Hurwitz pairs and triples, complex and related structures applicable in physics, Clifford- and Hurwitz-type structures applicable in physics, and direct physical applications. Two other volumes, containing together 20 papers, have recently appeared in *Bull. Soc. Sci. Lettres Lódź* 45 Sér. Rech. Déform. 19 (1995), 138 pp., and 20 (1995), 176 pp. The latter includes complete lists of organizers, lecturers and participants, amounting to 156 scientists from 30 countries. As in the case of the other volumes, each paper has been sent to two referees.

The Editors would like to thank warmly the authors of the papers submitted for their contributions. Special thanks are due to Mrs. Elżbieta Gałuszka and Miss Agnieszka Wieczorek, M.A., who took care of the technical preparation of this volume, and to the staff of the Publications Department of the Institute of Mathematics of the Polish Academy of Sciences.

Lódź, May 1996

CONTENTS

PART I. ANALYTIC FUNCTIONS
(ed. by P. Dolbeault, J. Lawrynowicz and O. Martio) .................. 11–134

Extremal Problems Related to One Complex Variable

Y. Komatu, On distortion of a class of analytic functions under a family of operators 13–19
J. Macura, A variational method for univalent functions connected with antigraphy 21–28
K. Shibata, A boundary value problem for Beltrami differential equation ........ 29–34
K. Sakan and J. Zajac, The Douady–Earle extension of quasihomographies .... 35–44

Real and Complex Analytic Geometry

E. Ballico, On projective degenerations of Veronese spaces .................. 45–51
G. Boryczka and L. M. Tovar, Hyperbolic-like manifolds, geometrical properties
and holomorphic mappings .................................................. 53–66
B. Bigolin, Remarques sur les idéaux de polynômes et de formes différentielles extérieures I .................................................. 67–70
C. Perelli Cippo, Remarques sur les idéaux de polynômes et de formes différentielles
extérieures II ................................................................. 71–74

Complex Mappings and Related Structures

B. Schwarz and U. Srebro, Carathéodory balls and norm balls in $H_{p,n} = \{z \in \mathbb{C}^n : \|z\|_p < 1\}$ .......................................................... 75–83
A. A. Fadlalla, Transfer of estimates from convex to strongly pseudoconvex domains
in $\mathbb{C}^n$ ............................................................................. 85–94
M. Morimoto and K. Fujita, Conical Fourier–Borel transformations for harmonic
functionals on the Lie ball ...................................................... 95–113
J. Godula and V. Starkov, Linearly invariant families of holomorphic functions in
the unit polydisc .................................................................. 115–127
G. Kohr and M. Kohr-Ile, Subordination theory for holomorphic mappings of several
complex variables ............................................................... 129–134

PART II. GENERALIZATIONS OF COMPLEX ANALYSIS
(ed. by K. Habetha, J. Lawrynowicz and F. Succi) ...................... 135–240

Generalized Complex Structures

I. R. Porteous, A tutorial on conformal groups ......................... 137–150
I. V. MELNIKOVA, Properties of an abstract pseudoresolvent and well-posedness of the
degenerate Cauchy problem .................................................. 151–157

Clifford-Type Structures
S. BERNSTEIN, Fundamental solutions for Dirac-type operators .................. 159–172
E. OBOBASHVILI, Some partial differential equations in Clifford analysis ........ 173–179
A. COMMON, Bi-axial Gegenbauer functions of the first and second kind ......... 181–187
G. LAVILLE and I. P. RAMADANOFF, Stone–Weierstrass theorem ................. 189–194

Hurwitz Pairs and Triples
J. CNOPS, Hurwitz pairs and Clifford valued inner products ....................... 195–208
E. RAMÍREZ DE ARELLANO, M. SHAPIRO and N. VASILEVSKI, Hurwitz analysis: basic
concepts and connection with Clifford analysis .................................. 209–221
J. LAWRYNOWICZ, J. REMBIELIŃSKI and F. SUCCI, Generalized Hurwitz maps of the
type $S \times V \rightarrow W$, anti-involutions, and quantum braided Clifford algebras . . . . 223–240

PART III. DEFORMATIONS OF MATHEMATICAL STRUCTURES APPLIED IN PHYSICS

Complex and Related Structures Applicable in Physics
R. KOVACHEVA, Zeros of Padé approximants for some classes of functions ........ 243–250
E. OBOBASHVILI, Effective solutions of some dual integral equations and their applications .................................................. 251–257
A. G. USHERIDZE, Generalized Gaudin models and Riccatians .................. 259–288

Clifford- and Hurwitz-Type Structures Applicable in Physics
P. LOUNESTO, Charge conjugation and Maiorana spinors in dimension 8 .......... 289–293
