VOLUME **29**

Numerical Analysis and Mathematical Modelling

WARSZAWA 1994

NUMERICAL ANALYSIS AND MATHEMATICAL MODELLING

Editors of the Volume

JAN KRZYSZTOF KOWALSKI

ANDRZEJ WAKULICZ

WARSZAWA 1994

CONTENTS

W. Gautschi, Summation of slowly convergent series 7–18
C. Brezinski, M. Redivo Zaglia and H. Sadok, Orthogonal polynomials and the Lanczos method 19–33
J. W. Schmidt, Dual algorithms for convex approximations of histograms using cubic C^1-splines 35–44
A. Pokrzywa, On an infinite-dimensional version of the Kreiss matrix theorem . . . 45–50
R. Ansorge, Entropy conditions and their numerical analogues for conservation laws 51–63
M. Křížek and Z. Milka, On an unconventional variational method for solving the problem of linear elasticity with Neumann or periodic boundary conditions . . . 65–77
G. M. Kobel'kov, On singular perturbation of the Stokes problem 79–83
G. Lube, Stabilized Galerkin finite element methods for convection dominated and incompressible flow problems 85–104
S. Carl, Enclosure of solutions for elliptic boundary value problems with nonmonotone discontinuous nonlinearity 105–114
F. Penzel, Error estimates for discretized Galerkin and collocation boundary element methods for time harmonic Dirichlet screen problems in $\mathbb{R}^3$ 115–134
W. Varnhorn, Finite differences and boundary element methods for non-stationary viscous incompressible flow 135–154
G. D. Akrivis, Finite element discretization of the Kuramoto–Sivashinsky equation . 155–163
B. Jovanović, Multipliers in Sobolev spaces and exact convergence rate estimates for the finite-difference schemes 165–173
J. K. Kowalski, Convergence of approximate solutions of a differential equation . . 175–193
M. Křížek and J. Mlýnek, On the preconditioned biconjugate gradients for solving linear complex equations arising from finite elements 195–205
M. Práger, Algebraic approach to domain decomposition 207–214
J. L. M. van Dorsselaer, J. F. B. M. Kraaijevanger and M. N. Spijker, About stability estimates and resolvent conditions 215–225
N. A. Strelkov, On projection-difference analogues of the identity operator 227–231
M. Kovács and F. P. Vasil'ev, On the convergence rate of regularization methods for ill-posed extremal problems 233–244
R. März, Practical Lyapunov stability criteria for differential algebraic equations . . 245–266
M. Arnold, Implicit Runge–Kutta methods for transferable differential-algebraic equations 267–274
T. Levitina, On numerical solution of multiparameter Sturm–Liouville spectral problems 275–281
C. Grossmann, Enclosures and semi-analytic discretization of boundary value problems 283–304
